

WT-6059 manual leather friction fading testing machine

1. Introductions

The manual leather friction fading testing machine is used to test the color fastness of dyed fur to dry and wet friction. Fix a white standard cotton friction cloth on the friction head of a manual leather friction fading testing machine, and use the friction head to drive the friction cloth to friction the colored test sample with a fixed stroke and constant pressure for a certain number of times. The color fastness of leather to friction is evaluated based on the staining level.

2. Relative test methods

ISO 105, ASTM D2054, AATCC 8, JIS L0849, GB/T 3920

3. specifications

No.	Item	Spec.
1	Friction speed	60 times per minute (manual control)
2	Stroke	104±3mm
3	Loading weight	9±0.9N
4	Counter	LCD display, set in the range 0-9999
5	Specimen can be tested in one test	1 pc
6	Dimension	66x20x28cm
7	Weight	10kg
